Walkthrough

**Function 1: The user wanted to look through the items that eBay recommended for them, just in case they found something that they liked before going to make a bid and start an auction.**
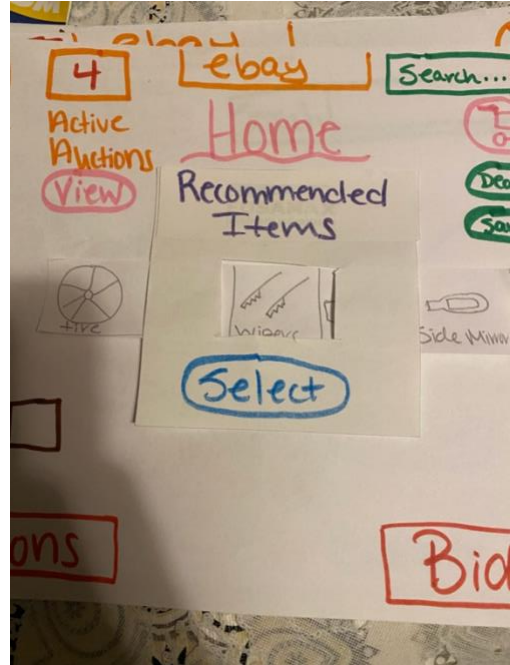

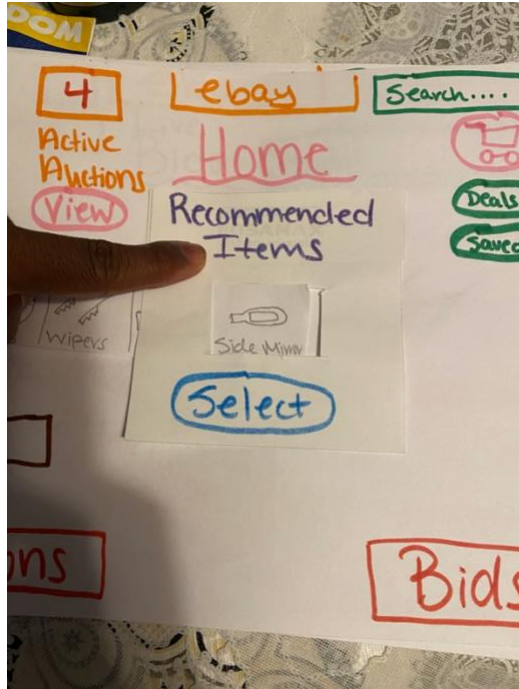

The user viewed recommended items and was able to use a slider to view those items, but didn't see anything that they liked.

Function 2: The user wanted to bid on getting a new engine for their car.

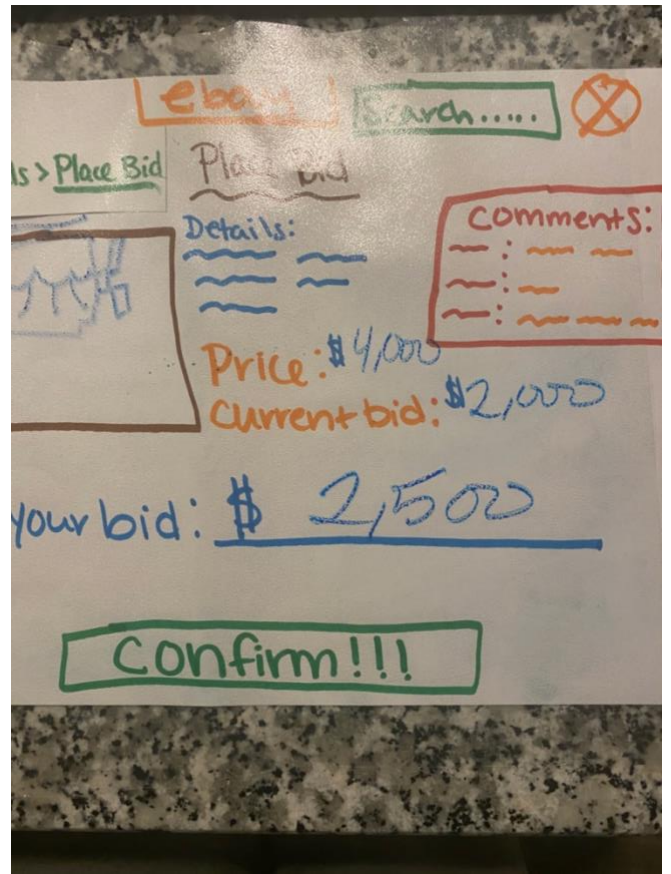

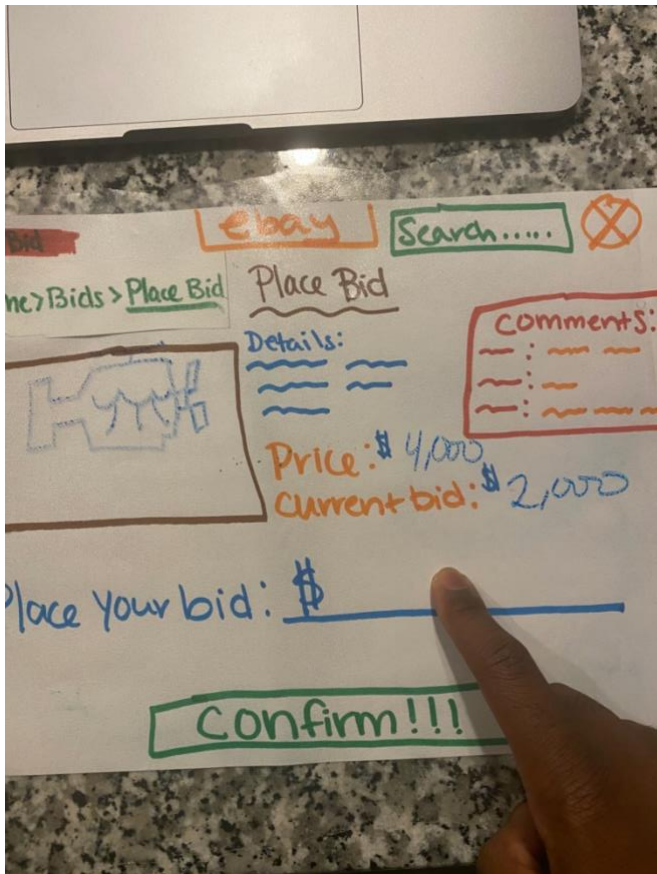

The user wanted to filter their bids by auto parts and used selected the checkbox.
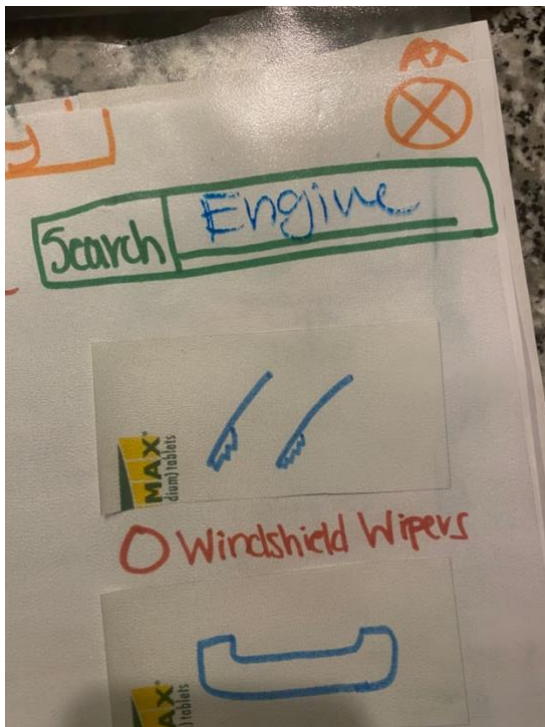

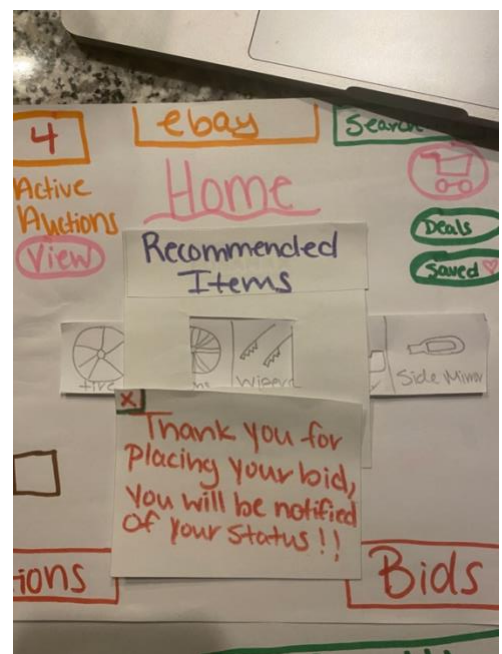

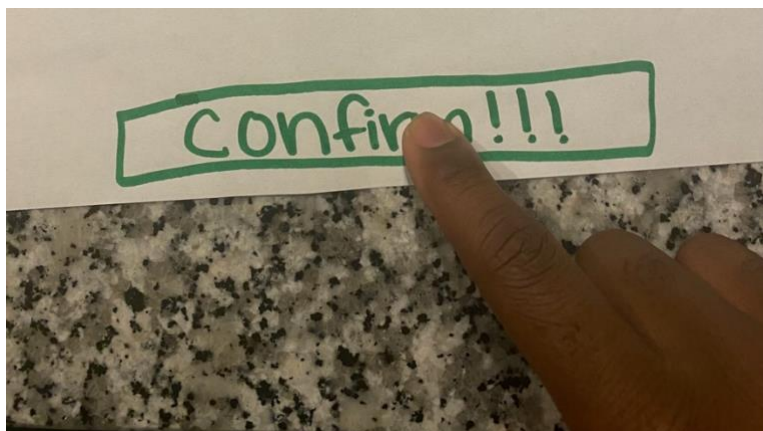

The user searched for engines and were taking to a results page, where they could select which engine they wanted. The user was able to place their bid on the v6 engine and confirm their bid, being taken to the bid page.

The user saw the bid page for the engine that they wanted and typed in their bidding price.

The user selected the confirm button and then were taken back to the main page and an alert dialog came up letting them know that their bid was successful and they could check the status.

**Function 3**: **The user wants to start their very own auction on selling an old tire off of their car, but they want to look at the type of auto parts available before doing that.**

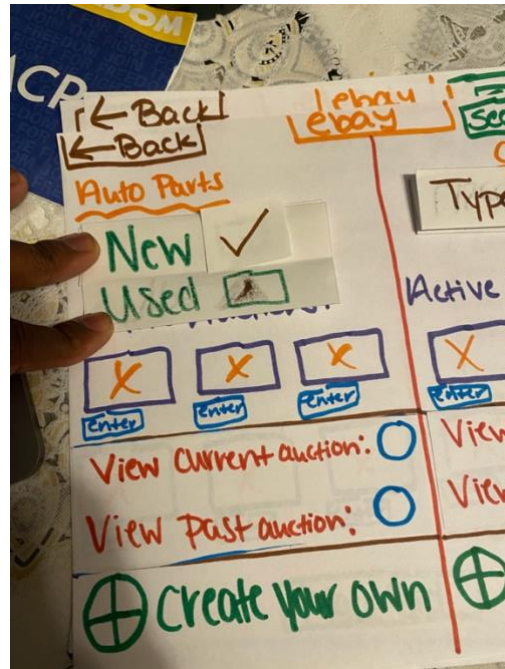

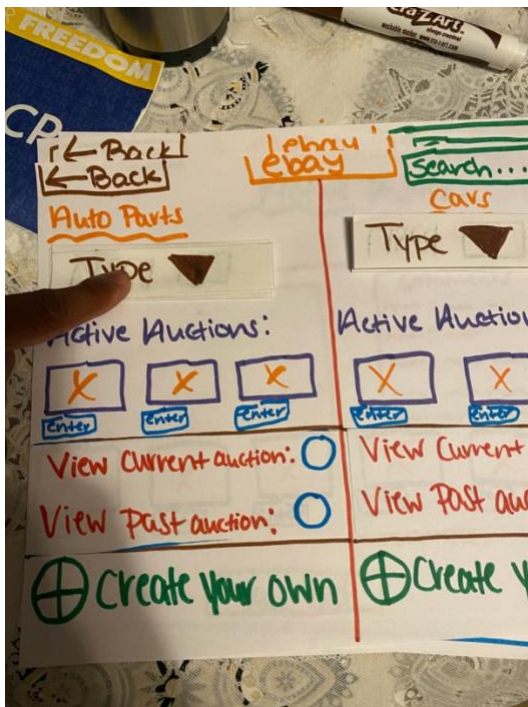

The user selects the type of auto parts they want from the drop down menu, and then they selected the new option using the checkbox.
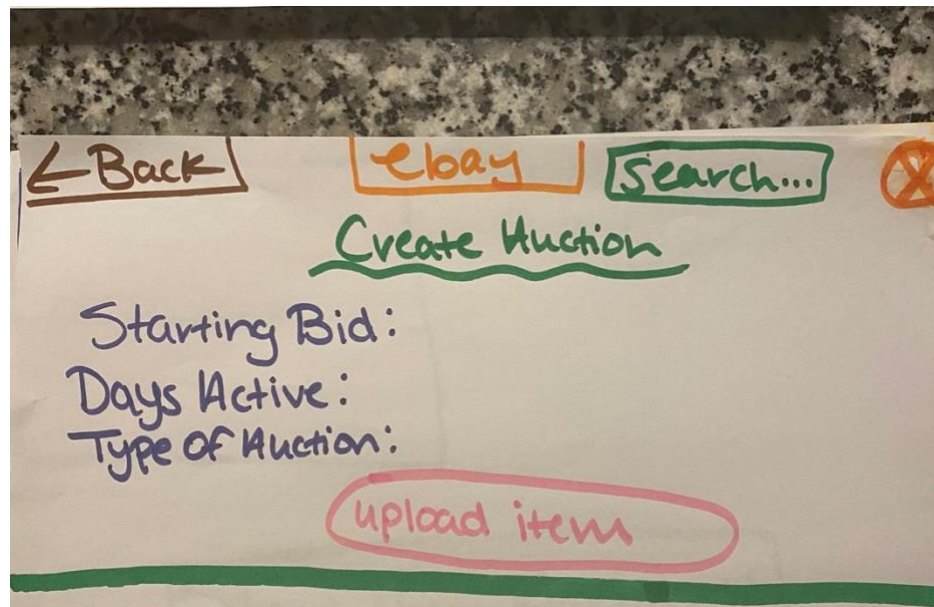

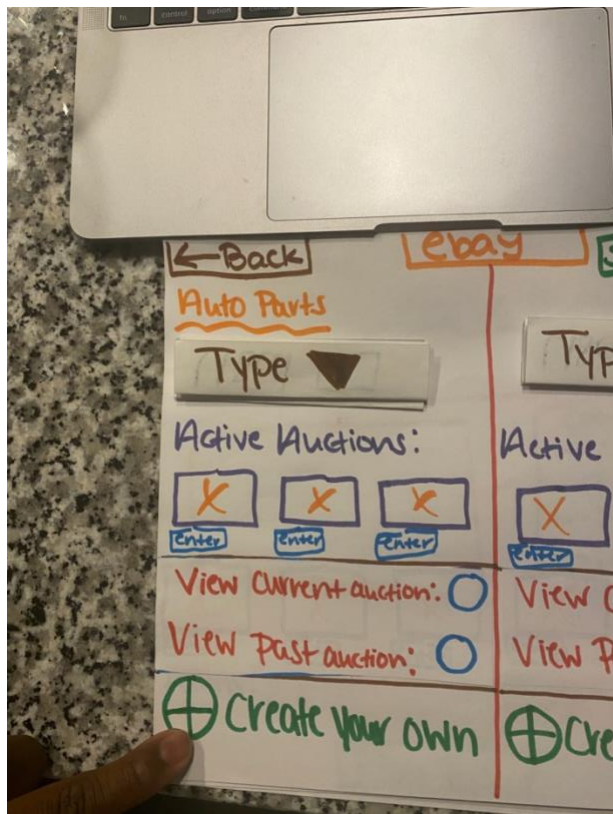

After not finding the auctions that they want, they decide to create their own auction.
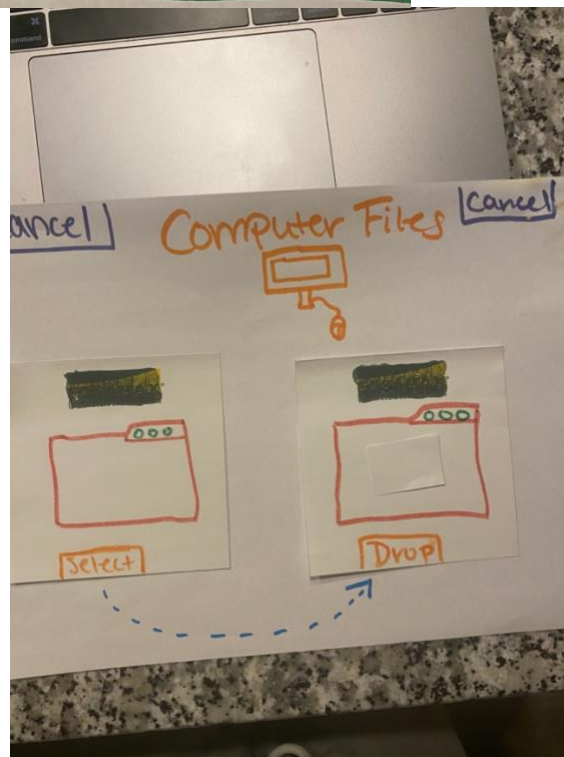

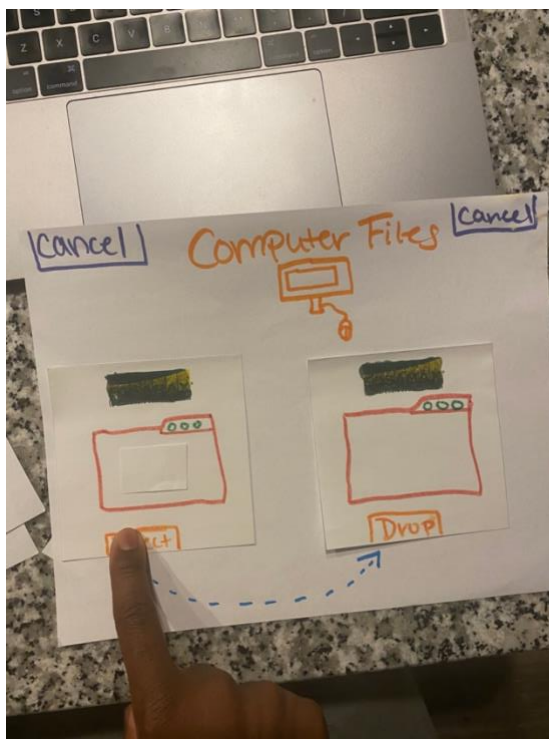

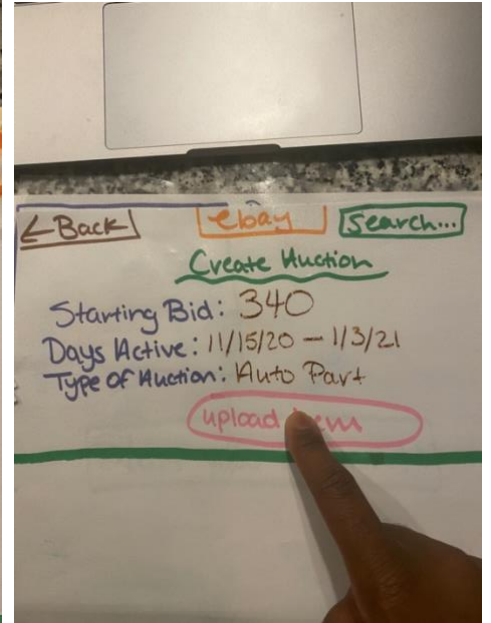

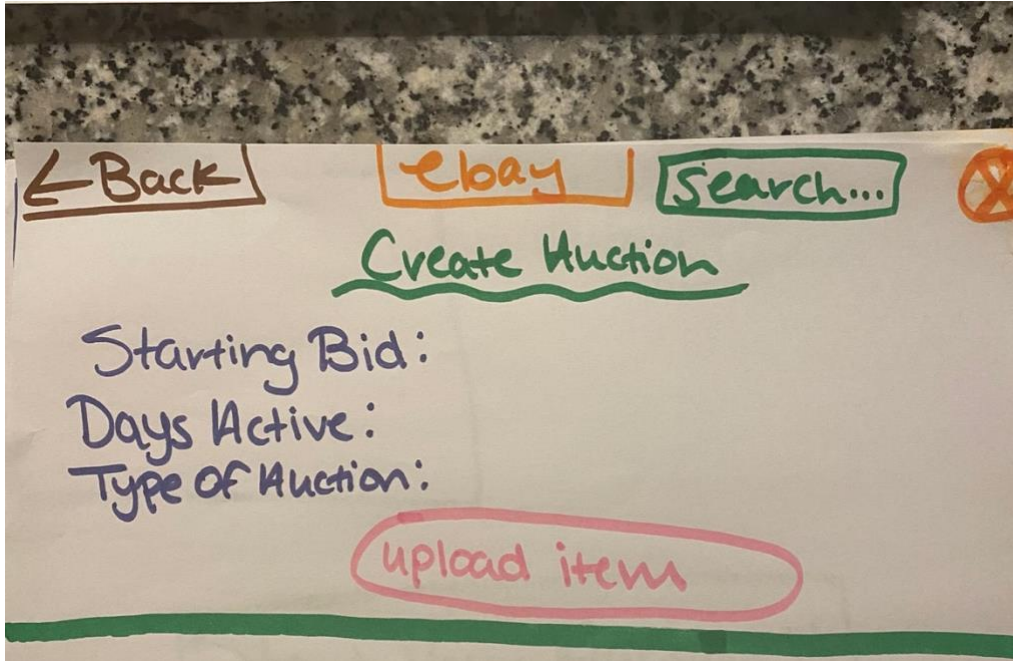

They filled out the proper information and then wanted to upload an image of the item that they are trying to sell. So they were taken to their computer files and were able to select the image that they wanted and drag and drop it to the auctions' site to be displayed.
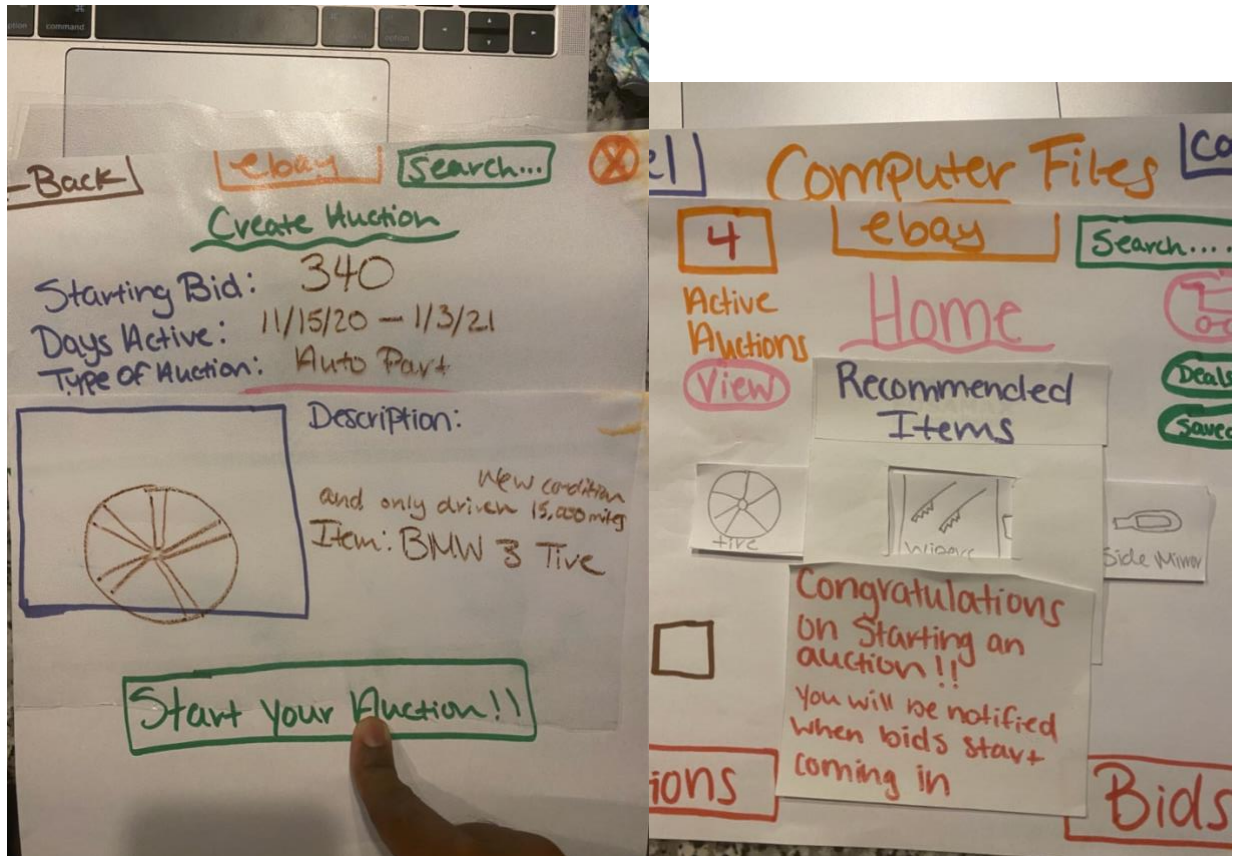

The user has the information about the particular item that they want to auction entered and then are ready to press the start auction button. They are taken back to the main page where an dialog box pops us letting them know that their auction was successful.

End Result:
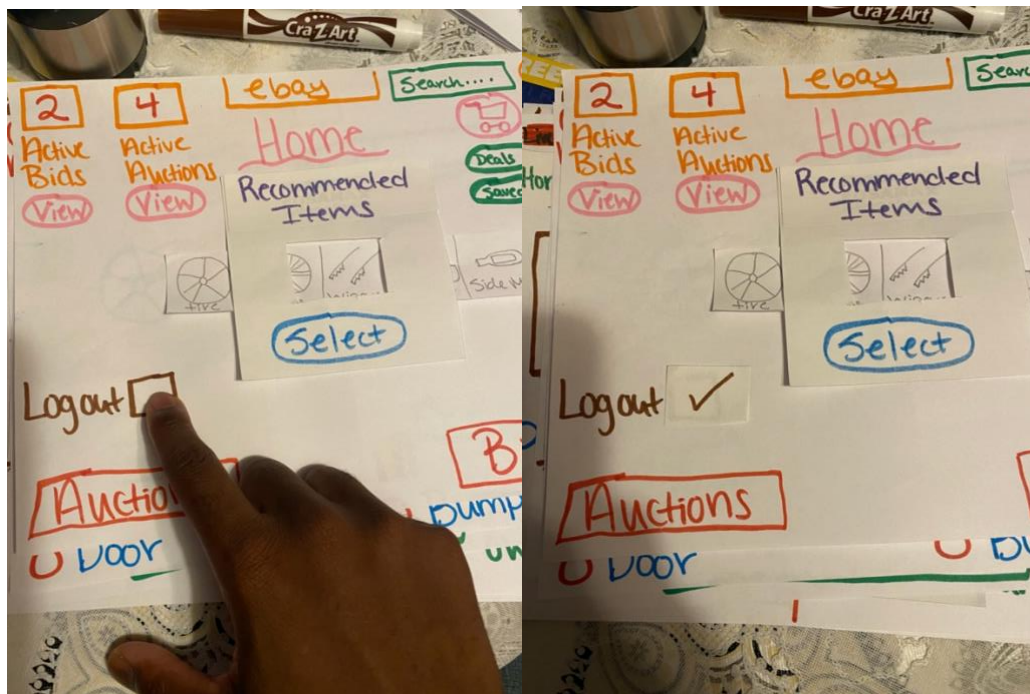

User selected that they wanted to logout after being satisfied from using the website because they were able to make their bids and start an auction, and view their recommended items list.
